1. Summary of Significant Accounting Policies

A. Allstate Life Insurance Company (“Company”) prepares its financial statements in conformity with accounting practices prescribed or permitted by the Illinois Department of Insurance (“IL DOI”). Prescribed statutory accounting practices include a variety of publications of the National Association of Insurance Commissioners (“NAIC”), as well as state laws, regulations and general administrative rules. Permitted statutory accounting practices encompass all accounting practices not so prescribed.

The state of Illinois requires its domestic insurance companies to prepare financial statements in conformity with the NAIC Accounting Practices and Procedures Manual, which includes all Statements of Statutory Accounting Principles (“SSAPs”), subject to any deviations prescribed or permitted by the IL DOI.

5. Investments

A. Mortgage Loans, including Mezzanine Real Estate Loans

- 1. The minimum and maximum lending rates for new mortgage loans for the first six months of 2011 and in 2010 were 3.76% and 6.25%, and 4.00% and 10.00%, respectively. All new mortgage loans in 2011 and 2010 were commercial.
- 2. During the first six months of 2011, three commercial mortgage loans with carrying values of \$47 million, excluding interest, were refinanced. The decline in interest rates on these loans ranged from 0.05% to 1.91%. In 2010, eight commercial mortgage loans with carrying values of \$114 million, excluding interest, were refinanced. The decline in interest rates on these loans ranged from 0.19% to 2.54%. Interest rates were not reduced on commercial mortgage loans as a result of troubled debt restructuring in 2011 or 2010.
- 3. For loans acquired during the first six months of 2011 and in 2010, the maximum percentage of any one loan to the value of security at the time of the loan was 85.8% and 109.1%, respectively.

D. Loan-Backed Securities

- 1. Prepayment assumptions for loan-backed and structured securities were obtained from brokers and internal estimates.
- 2. The Company is required to assess if an impairment is other than temporary when the fair value of a loan-backed or structured security is less than the amortized cost. The table below presents the aggregate amortized cost of loan-backed and structured securities before recognized other-than-temporary impairments (“OTTI”), the amount of OTTI recognized and the fair value of those securities classified by the basis of impairment.

The Company did not have OTTI that resulted from the inability or lack of intent to retain an investment in a security for a period of time sufficient to recover the amortized cost basis in 2011 or 2010.

- 3. The following loan-backed and structured securities were OTTI at the end of each quarter presented, as a result of the discounted present value of the cash flows expected to be collected being less than amortized cost.

 - a. Cash collateral was received in connection with its securities lending program totaling \$468 million and \$333 million at June 30, 2011 and December 31, 2010, respectively. The Company monitors the fair value of securities loaned on a daily basis and obtains additional collateral as necessary to mitigate counterparty credit risk. Commitments to acquire financial interests or make additional capital contributions

The Company made commitments to invest in limited partnerships interests of \$598 million and \$633 million at June 30, 2011 and December 31, 2010, respectively. These commitments are generally for making additional capital contributions or acquiring financial interests.

Credit guarantee

The Company owns certain bonds that obligated it to exchange credit risk or to forfeit principal due, depending on the nature or occurrence of specified credit events for the referenced entities. In the event all such specified credit events were to occur, the Company's maximum amount at risk on these bonds, as measured by the amount of the aggregate initial investment, was \$67 million and \$64 million at June 30, 2011 and December 31, 2010, respectively. The obligations associated with these bonds expire at various dates on or before March 11, 2018.

NOTES TO FINANCIAL STATEMENTS

connection with this transaction the Company, ALNY and the Corporation agreed to indemnify Prudential for certain pre-closing contingent liabilities (including extra contractual liabilities of the Company and ALNY and liabilities specifically excluded from the transaction) that the Company and ALNY have agreed to retain. In addition, the Company, ALNY and the Corporation will each indemnify Prudential for certain post-closing liabilities that may arise from the acts of the Company, ALNY and their agents, including in connection with the Company's and ALNY's provision of transition services. The Reinsurance Agreements contain no limitations or indemnifications with regard to insurance risk transfer, and transferred all the future risks and responsibilities for performance on the underlying variable annuity contracts to Prudential, including those related to benefit guarantees. Management does not believe this agreement will have a material adverse effect on results of operations, cash flows or the financial position of the Company.

E. All Other Contingencies

The Company is currently being examined by certain states for compliance with unclaimed property laws. It is possible that this examination may result in additional payments of abandoned funds to states and to changes in the Company's practices and procedures for the identification of escheatable funds, which could impact benefit payments and reserves, among other consequences; however, it is not likely to have a material effect on the operating results, cash flows or financial position of the Company.

Volume for over-the-counter derivative contracts is represented by their notional amounts. Volume for exchange traded derivatives is represented by the number of contracts which is the basis on which they are traded (n/a = not applicable). The notional amounts specified in the contracts are used to calculate the exchange of contractual payments under agreements and are generally not representative of the potential for gain or loss on these agreements. However, the notional amounts specified in credit default swap selling protection agreements represent the maximum amount of potential loss, assuming no recoveries. Statement values are generally equal to consideration paid or received except when non-hedge accounting is used, in which case statement value is equal to current fair value. Fair value is the estimated amount that the Company would receive or pay to terminate the derivative contracts at the reporting date. The fair value of exchange traded derivative contracts is based on observable market quotations in active markets, whereas the fair value of non-exchange traded derivative contracts is determined using widely accepted valuation models and other appropriate valuation methods.

2. The credit risk, market risk and cash requirements of the Company's derivative instruments utilized during 2011 and 2010 are discussed in Note 8, Part A of the December 31, 2010 Annual Statement. The accounting policies for the Company's derivative instruments are disclosed in Note 1, Part C and Note 8, Part C of the December 31, 2010 Annual Statement.

NOTES TO FINANCIAL STATEMENTS

3. The following table summarizes the credit exposure on the Company's over-the-counter contracts:

(in millions)	June 30, 2011	December 31, 2010
Interest rate swap agreements	\$ 117	\$ 114
Option contracts	4	327
Interest rate swaption agreements	1	4

Interest rate cap and floor agreements	(5)	(3)
Credit default swap agreements - buying protection	(1)	(1)
	<u>\$ 111</u>	<u>\$ 478</u>

Credit exposure represents the Company's potential loss if all counterparties concurrently fail to perform under the contractual terms of the contracts and all collateral, if any, becomes worthless. This exposure is measured by the statement value of over-the-counter derivative contracts with a positive statement value at the reporting date reduced by the effect, if any, of legally enforceable master netting agreements. The Company has not incurred any losses on derivative financial instruments due to counterparty nonperformance.

4. The Company's policy for requiring collateral is discussed in Note 8, Part A of the December 31, 2010 Annual Statement. In general, the collateral pledged by the Company is in the custody of a counterparty or an exchange. However, the Company has access to this collateral at any time, subject to replacement. For exchange traded derivatives, the exchange requires margin deposits as well as daily cash settlements of margin accounts. The Company pledged the following in the form of margin deposits:

(in millions)	June 30, 2011	December 31, 2010
Cash	\$ 2	\$ 1
Securities	\$ 3	\$ 17

Usually, the Company pledges U.S. Treasury bonds to satisfy this collateral requirement. The Company uses master netting agreements for over-the-counter derivative transactions. These agreements permit either party to net payments due for transactions covered by the agreements. Under the provisions of the agreements, collateral is either pledged or obtained when certain predetermined exposure limits are exceeded.

Off-balance sheet financial instruments

1. The contractual amounts of off-balance sheet financial instruments were as follows:

(in millions)	June 30, 2011	December 31, 2010
Commitments to invest in limited partnership interests	\$ 598	\$ 633
Private placement commitments	\$ 76	\$ 111
Credit guarantees	\$ 67	\$ 64
Other loan commitments	\$ 150	\$ 20

2. Commitments to invest generally represent commitments to acquire financial interests or instruments. The Company enters into these agreements to allow for additional participation in certain limited partnership investments.

Private placement commitments represent conditional commitments to purchase private placement debt and equity securities at a specified future date. The Company regularly enters into these agreements in the normal course of business.

Credit guarantees represent conditional commitments included in certain bonds owned by the Company. These commitments obligate the Company to exchange credit risk or to forfeit principal due, depending on the nature or occurrence of specified credit events for referenced entities. The obligations associated with these bonds expire at various dates on or before March 11, 2018.

Other loan commitments are agreements to lend to a borrower provided there is no violation of any condition established in the contract. The Company enters into these agreements to commit to future loan fundings at predetermined interest rates. Commitments generally have fixed or varying expiration dates or other termination clauses.

3. The contractual amounts represent the amount at risk if the contract is fully drawn upon, the counterparty defaults and the value of any underlying security becomes worthless.

4. The Company does not require collateral or other security to support off-balance sheet financial instruments with credit risk.

17. Sale, Transfer and Servicing of Financial Assets and Extinguishments of Liabilities

B. Transfer and Servicing of Financial Assets

2. The Company entered into securities lending agreements using U.S. Treasury and corporate bonds within the General Account in 2011 and 2010. Securities lent were either specifically identified by the lending bank or segregated into a separate custody account. The fair value of securities loaned within the General Account were \$453 million and \$324 million at June 30, 2011 and December 31, 2010, respectively. For more information on securities lending collateral please see Note 5, Part E of the December 31, 2010 Annual Statement. The Company did not have securities lending transactions within the Separate Accounts at June 30, 2011 or December 31, 2010.

C. In the course of managing the Company's investment portfolio, securities may be sold and reacquired within 30 days of the sale date. Such transactions are referred to as wash sales. The Company did not have wash sales during the second quarter of 2011 that involved unrated securities or securities with a NAIC 3 designation of below. During the second quarter of 2010, the Company sold one NAIC designation 3 bond with a book value of \$2 million and then reacquired it for \$2 million. A gain of \$32 thousand was recognized on this transaction. The Company did not have any other wash sales during the second quarter of 2010 that involved unrated securities or securities with a NAIC 3 designation or below.

20. Fair Value Measurements

A. Fair value is defined, per SSAP 100, *Fair Value Measurements* ("SSAP No. 100"), as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. SSAP No. 100 identified three valuation

STATEMENT AS OF JUNE 30, 2011 OF ALLSTATE LIFE INSURANCE COMPANY

NOTES TO FINANCIAL STATEMENTS

techniques which are used, either independently or in combination, to determine fair value: 1) market approach; 2) income approach; and 3) cost approach. SSAP No. 100 also contains guidance about observable and unobservable inputs, which are assumptions that market participants would use in pricing an asset or liability. To increase consistency and comparability in fair value measurements, the fair value hierarchy prioritizes the inputs to valuation techniques into three broad levels; levels 1, 2 and 3. The hierarchy for inputs used in determining fair value maximizes the use of observable inputs and minimizes the use of unobservable inputs by requiring that observable inputs be used when available.

The Company has two types of situations where investments are classified as Level 3 in the fair value hierarchy. The first is where quotes continue to be received from independent third-party valuation service providers and all significant inputs are market observable; however, there has been a significant decrease in the volume and level of activity for the asset when compared to normal market activity such that the degree of market observability has declined to a point where categorization as a Level 3 measurement is considered appropriate. The indicators considered in determining whether a significant decrease in the volume and level of activity for a specific asset has occurred include the level of new issuances in the primary market, trading volume in the secondary market, the level of credit spreads over historical levels, applicable bid-ask spreads, and price consensus among market participants and other pricing sources. The second situation is where specific inputs significant to the fair value estimation models are not market observable, including the Company's use of broker quotes.

Transfers into Level 3 during the six months ended June 30, 2011 and 2010 included situations where there was a change in the NAIC designation that resulted in the asset being reported and measured at fair value. In addition, transfers into Level 3 included situations where assets measured at lower of cost or market were reported at cost at December 31, 2010 and 2009 and fair value at June 30, 2011 and 2010.

Transfers out of Level 3 during the six months ended June 30, 2011 and 2010, including situations where a broker quote was used in the prior period and a fair value quote became available from the Company's independent third-party valuation service provider in the current period. A quote utilizing the new pricing source was not available as of the prior period, and any gains and losses related to the change in valuation source for individual securities were not significant. In addition, transfers out of Level 3 during the six months ended June 30, 2011 and 2010 included situations where there was a change in the NAIC designation that resulted in the asset not being reported and measured at fair value. Also, transfers out of Level 3 included situations where assets measured at lower of cost or market were reported at fair value at December 31, 2010 and 2009 and cost at June 30, 2011 and 2010.

3. Transfers between level categorizations may occur due to changes in the availability of market observable inputs, which generally are caused by changes in market conditions such as liquidity, trading volume or bid-ask spreads. Transfers between level categorizations may also occur due to changes in the valuation source. For example, in situations where a fair value quote is not provided by the Company's independent third-party valuation service provider and as a result, the price is stale or has been replaced with a broker quote, the security is transferred into Level 3. Transfers in and out of level categorizations are reported as having occurred at the beginning of the quarter in which the transfer occurred.
4. In determining fair value, the Company principally uses the market approach which generally utilizes market transaction data for the same or similar instruments. To a lesser extent, the Company uses the income approach which involves determining fair values from discounted cash flow methodologies. For the majority of Level 2 and Level 3 valuations, a combination of the market and income approaches is used.

Listed below is a summary of the significant valuation techniques for assets and liabilities measured and reported at fair value.

Level 2 measurements

Bonds

Corporate, including privately placed - The primary inputs to the valuation include quoted prices for identical or similar assets in markets that are not active, contractual cash flows, benchmark yields and credit spreads. Also included are privately placed securities valued using a discounted cash flow model that is widely accepted in the financial services industry and uses market observable inputs and inputs derived principally from, or corroborated by, observable market data. The primary inputs to the discounted cash flow model include an interest rate yield curve, as well as published credit spreads for similar assets in markets that are not active that incorporate the credit quality and industry sector of the issuer.

Residential mortgage-backed securities ("RMBS") - The primary inputs to the valuation include quoted prices for identical or similar assets in markets that are not active, contractual cash flows, benchmark yields, prepayment speeds, collateral performance and credit spreads.

Commercial mortgage-backed securities ("CMBS") - The primary inputs to the valuation include quoted prices for identical or similar assets in markets that are not active, contractual cash flows, benchmark yields, collateral performance and credit spreads.

Unaffiliated common stocks - The primary inputs to the valuation include quoted prices for identical or similar assets in markets that are not active.

Derivatives - Exchange listed derivatives that are not actively traded are valued based on quoted prices for identical instruments in markets that are not active. Over-the-counter derivatives, including interest rate swap agreements, foreign currency swap agreements, foreign exchange forward contracts, and certain credit default swap agreements, are valued using models that rely on inputs such as interest rate yield curves, currency rates, and counterparty credit spreads that are observable for substantially the full term of the contract. The valuation techniques underlying the models are widely accepted in the financial services industry and do not involve significant judgment.

Separate Accounts - RightFit products may be supported by corporate bonds, including those that are privately placed. The primary inputs to the valuation include quoted market prices for identical or similar assets in markets that are not active, contractual cash flows, benchmark yields, collateral performance and credit spreads. Also included are privately placed securities valued using a discounted cash flow model that is widely accepted in the financial services industry and uses market observable inputs and inputs derived principally from, or corroborated by, observable market data. The primary inputs to the discounted cash flow model include

an interest rate yield curve, as well as published credit spreads for similar assets in markets that are not active that incorporate the credit quality and industry sector of the issuer. In addition, Right Fit products may be supported by exchange listed derivatives that are not actively traded are valued based on quoted prices for identical instruments in markets that are not active.

Level 3 measurements

Bonds

Corporate, including privately placed - Primarily valued based on non-binding broker quotes.

RMBS - Subprime residential mortgage-backed securities ("Subprime") - The primary inputs to the valuation include quoted prices for identical or similar assets in markets that exhibit less liquidity relative to those markets supporting Level 2 fair value measurements, contractual cash flows, benchmark yields, prepayment speeds, collateral performance and credit spreads. Also included are Subprime valued based on non-binding broker quotes. Due to the reduced availability of actual market prices or relevant observable inputs as a result of the decrease in liquidity that has been experienced in the market for these securities, Subprime are categorized as Level 3.

CMBS - The primary inputs to the valuation include quoted prices for identical or similar assets in markets that exhibit less liquidity relative to those markets supporting Level 2 fair value measurements, contractual cash flows, benchmark yields, collateral performance and credit spreads. Also included are CMBS that are valued based on non-binding broker quotes. Due to the reduced availability of actual market prices or relevant observable inputs as a result of the decrease in liquidity that has been experienced in the market for these securities, certain CMBS are categorized as Level 3.

Asset-backed securities ("ABS") - The primary inputs to the valuation include quoted prices for identical or similar assets in markets that exhibit less liquidity relative to those markets supporting Level 2 fair value measurements, contractual cash flows, benchmark yields, prepayment speeds, collateral performance and credit spreads. Also included are ABS that are valued based on non-binding broker quotes. Due to the reduced availability of actual market prices or relevant observable inputs as a result of the decrease in liquidity that has been experienced in the market for these securities, certain ABS are categorized as Level 3.

Unaffiliated common stocks - Value based on prices or valuation techniques that require inputs that are both unobservable and significant to the overall fair value measurement. Unobservable inputs reflect the Company's estimates of assumptions that market participants would use in valuing the asset.

Derivatives - Certain over-the-counter derivatives, such as interest rate cap and floor agreements and swaption agreements are valued using models that are widely accepted in the financial services industry. These are categorized as Level 3 as a result of the significance of non-market observable inputs such as volatility. Other primary inputs include interest rate yield curves and credit spreads.

Separate Accounts - The fair value of mortgage loans on real estate is based on discounted contractual cash flows or if the loans are impaired due to credit reasons, the fair value of collateral less costs to sell. Risk adjusted discount rates are selected using current rates at which similar loans would be made to borrowers with similar characteristics using similar types of properties as collateral.

5. All information related to derivatives carried at fair value is presented above.

Deferred annuities included in deposit-type contracts are valued using discounted cash flow models which incorporate market value margins, which are based on the cost of holding economic capital, and the Company's own credit risk. Immediate annuities without life contingencies are valued at the present value of future benefits using market implied interest rates which include the Company's own credit risk. Fixed annuities were valued at the account value less surrender charges.

The liabilities for collateral for securities lending and derivatives are valued at carrying value due to their short-term nature.
