NOTES TO FINANCIAL STATEMENTS

Notes required on a quarterly basis have been updated. There have been no material changes to the following December 31, 2014 Annual Statement notes: 1(B), 2-4, 5(B, C, F, G, K), 6-8, 9(A, B, E-G), 10, 11(A), 12(B-I), 13-15, 16-Off-balance sheet financial instruments, 17(A), 18, 19, 21(A, B, D-G), 23, 24(A-D) and 26-35. Only material or significant changes from the Annual Statement have been updated for all other notes, or portions thereof.

1. Summary of Significant Accounting Policies

- A. Allstate Life Insurance Company (“Company”) prepares its financial statements in conformity with accounting practices prescribed or permitted by the Illinois Department of Insurance (“IL DOI”). Prescribed statutory accounting practices include a variety of publications of the National Association of Insurance Commissioners (“NAIC”), as well as state laws, regulations and general administrative rules. Permitted statutory accounting practices encompass all accounting practices not so prescribed.

The State of Illinois requires its domestic insurance companies to prepare financial statements in conformity with the NAIC Accounting Practices and Procedures Manual, which includes all Statements of Statutory Accounting Principles (“SSAPs”), subject to any deviations prescribed or permitted by the IL DOI.

The Company’s net income and capital and surplus did not include any accounting practices prescribed or permitted by the IL DOI during 2015 and 2014.

C. Investments

Loan-backed and structured securities (“LBASS”) with a NAIC designation of 1 through 5 are reported at amortized cost using the effective yield method. LBASS with a NAIC designation of 6 are reported at the lower of amortized cost or fair value, with the difference reflected in unassigned surplus as unrealized capital loss. In general, LBASS utilize a multi-step process for determining carrying value and NAIC designation in accordance with SSAP No. 43R, *Loan-backed and Structured Securities*. For LBASS that are purchased with high credit quality and fixed interest rates, the effective yield is recalculated on a retrospective basis. For all other LBASS, the effective yield is recalculated on a prospective basis.

5. Investments

A. Mortgage Loans, including Mezzanine Real Estate Loans

1. The minimum and maximum lending rates for new mortgage loans in the first six months of 2015 were 3.56% and 4.35%, respectively. The minimum and maximum lending rates for new mortgage loans in 2014 were 2.00% and 6.75%, respectively. All new mortgage loans were commercial.
2. For loans acquired during the first six months of 2015, the maximum percentage of any one loan to the value of the property at the time of the loan was 74.8%. For loans acquired during 2014, the maximum percentage of any one loan to the value of the property at the time of the loan was 99.2%.

D. Loan-Backed Securities

1. Prepayment assumptions for LBASS were obtained from external sources and internal estimates.
2. The table below presents the aggregate amortized cost of LBASS before recognized other-than-temporary impairment (“OTTI”) adjustments, the amount of OTTI adjustments recognized and the fair value of those securities.

4. Unrealized losses are calculated as the difference between amortized cost and fair value. They result from declines in fair value below amortized cost and are evaluated for OTTI. Every LBASS with unrealized losses was included in the portfolio monitoring process.

The following table summarizes gross unrealized losses and the fair value of LBASS by the length of time the individual securities have been in a continuous unrealized loss position.

(in millions)		June 30, 2015	December 31, 2014
a. The aggregate amount of unrealized losses:			
	1. Less than 12 months	\$ (5)	\$ (4)
	2. 12 months or longer	\$ (63)	\$ (64)
b. The aggregate related fair value of securities with unrealized losses:			
	1. Less than 12 months	\$ 338	\$ 230
	2. 12 months or longer	\$ 426	\$ 484

5. As of June 30, 2015, the aggregate amount of unrealized losses related to LBASS was \$68 million. Of the \$68 million of unrealized losses, \$32 million were related to LBASS with an unrealized loss position less than 20% of amortized cost, the degree which suggests these securities did not pose a high risk of being other-than-temporarily impaired. Of the \$32 million, \$21 million of unrealized losses were related to investment grade LBASS. Investment grade is defined as a security having a NAIC designation of 1 or 2; a rating of Aaa, Aa, A or Baa from Moody's; a rating of AAA, AA, A or BBB from Standard & Poor's, Fitch, Dominion, Kroll, Realpoint or Egan Jones; a rating of aaa, aa, a or bbb from A.M. Best; or a comparable internal rating if an externally provided rating is not available. Unrealized losses on investment grade securities are principally related to increasing risk-free interest rates or widening credit spreads since the time of initial purchase.

As of June 30, 2015, the remaining \$36 million of unrealized losses were related to LBASS in unrealized loss positions greater than or equal to 20% of amortized cost. Investment grade LBASS comprising \$33 million of these unrealized losses were evaluated based on factors such as discounted cash flows and the financial condition and near-term and long-term prospects of the issue or issuer and were determined to have adequate resources to fulfill contractual obligations. The remaining \$3 million of unrealized losses were related to below investment grade LBASS that had been in an unrealized loss position greater than or equal to 20% of amortized cost for a period of twelve or more consecutive months as of June 30, 2015. Unrealized losses on below investment grade securities were the result of wider credit spreads resulting from higher risk premiums since the time of initial purchase. These wider spreads are largely due to the risk associated with the underlying collateral supporting certain LBASS.

LBASS in an unrealized loss position were evaluated based on actual and projected collateral losses relative to the securities' positions in the respective securitization trusts, security specific expectations of cash flows and credit ratings. This evaluation also takes into consideration credit enhancement, measured in terms of: (1) subordination from other classes of securities in the trust that are contractually obligated to absorb losses before the class of security the Company owns; (2) the expected impact of other structural features embedded in the securitization trust beneficial to the class of securities the Company owns, such as overcollateralization and excess spread; and (3) for certain LBASS in an unrealized loss position, credit enhancements from reliable bond insurers, where applicable.

As of June 30, 2015, the Company had not made a decision to sell and it was not more likely than not the Company would be required to sell these securities with unrealized losses before recovery of the amortized cost basis. As of June 30, 2015 the Company had the intent and ability to hold LBASS with unrealized losses for a period of time sufficient for them to recover.

20. Fair Value Measurements

- A. Fair value is defined, per SSAP No. 100, *Fair Value Measurements* (“SSAP No. 100”), as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. SSAP No. 100 identified three valuation techniques which are used, either independently or in combination, to determine fair value: (1) market approach; (2) income approach; and (3) cost approach. SSAP No. 100 also contains guidance about observable and unobservable inputs, which are assumptions that market participants would use in pricing an asset or liability. To increase consistency and comparability in fair value measurements, the fair value hierarchy prioritizes the inputs to valuation techniques into three broad levels: 1, 2 and 3. The hierarchy for inputs used in determining fair value maximizes the use of observable inputs and minimizes the use of unobservable inputs by requiring that observable inputs be used when available.

The Company has two types of situations where investments are classified as Level 3. The first is where specific inputs significant to the fair value estimation models are not market observable. This primarily occurs in the Company’s use of broker quotes to value certain securities where the inputs have not been corroborated to be market observable, and the use of valuation models that use significant non-market observable inputs. The second situation where the Company classifies securities in Level 3 is where quotes continue to be received from independent third-party valuation service providers and all significant inputs are market observable; however, there has been a significant decrease in the volume and level of activity for the asset when compared to normal market activity such that the degree of market observability has declined to a point where categorization as a Level 3 measurement is considered appropriate. The indicators considered in determining whether a significant decrease in the volume and level of activity for a specific asset has occurred include the level of new issuances in the primary market, trading volume in the secondary market, the level of credit spreads over historical levels, applicable bid-ask spreads, and price consensus among market participants and other pricing sources.

There were no transfers into Level 3 during the six months ended June 30, 2015 or in 2014. Transfers out of Level 3 during 2015 and 2014 included securities measured at lower of cost or market and reported at cost in 2015 and 2014, and fair value in 2014 and 2013. Transfers out of Level 3 during 2015 included situations where a broker quote was used in the prior period and a fair value quote became available from the Company's independent third-party valuation service provider in the current period. A quote utilizing the new pricing source was not available in the prior period, and any gains and losses related to the change in valuation source for individual securities were not significant. In addition, transfers out of Level 3 during 2015 included changes in the NAIC designation that resulted in the asset not being reported and measured at fair value.

3. Transfers between level categorizations may occur due to changes in the availability of market observable inputs, which generally are caused by changes in market conditions such as liquidity, trading volume or bid-ask spreads. Transfers between level categorizations may also occur due to changes in the valuation source. For example, in situations where a fair value quote is not provided by the Company's independent third-party valuation service provider and as a result, the price is stale or has been replaced with a broker quote whose inputs have not been corroborated to be market observable, the security is transferred into Level 3. Transfers in and out of level categorizations are reported as having occurred at the beginning of the quarter in which the transfer occurred.
4. In determining fair value, the Company principally uses the market approach which generally utilizes market transaction data for the same or similar instruments. To a lesser extent, the Company uses the income approach which involves determining fair values from discounted cash flow methodologies. For the majority of Level 2 and Level 3 valuations, a combination of the market and income approaches is used.

Listed below is a summary of the significant valuation techniques for assets and liabilities measured and reported at fair value.

Level 2 measurements

Bonds - Industrial and miscellaneous bonds consist of corporate bonds, including those that are privately placed, residential mortgage-backed securities ("RMBS") and asset-backed securities ("ABS"). The primary inputs to the valuation for corporate bonds, including those that are privately placed include quoted prices for identical or similar assets in markets that are not active, contractual cash flows, benchmark yields and credit spreads. Also included are privately placed securities valued using a discounted cash flow model that is widely accepted in the financial services industry and uses market observable inputs and inputs derived principally from, or corroborated by, observable market data. The primary inputs to the discounted cash flow model include an interest rate yield curve, as well as published credit spreads for similar assets in markets that are not active that incorporate the credit quality and industry sector of the issuer. The primary inputs to the valuation for RMBS and ABS include quoted prices for identical or similar assets in markets that are not active, contractual cash flows, benchmark yields, prepayment speeds, collateral performance and credit spreads. Certain ABS are valued based on non-binding broker quotes whose inputs have been corroborated to be market observable.

Unaffiliated common stocks - The primary inputs to the valuation include quoted prices for identical or similar assets in markets that are not active.

Derivatives - Free-standing exchange listed derivatives that are not actively traded are valued based on quoted prices for identical instruments in markets that are not active. Over-the-counter derivatives, including interest rate swap agreements, foreign currency swap agreements, certain options and certain credit default swap agreements, are valued using models that rely on inputs such as interest rate yield curves, currency rates, and counterparty credit spreads that are observable for substantially the full term of the contract. The valuation techniques underlying the models are widely accepted in the financial services industry and do not involve significant judgment.

Separate Accounts - Indexed variable annuity contracts may be supported by corporate bonds, including those that are privately placed. The primary inputs to the valuation include quoted prices for identical or similar assets in markets that are not active, contractual cash flows, benchmark yields and credit spreads. Also included are privately placed securities valued using a discounted cash flow model that is widely accepted in the financial services industry and uses market observable inputs and inputs derived principally from, or corroborated by, observable market data. The primary inputs to the discounted cash flow model include an interest rate yield curve, as well as published credit spreads for similar assets in markets that are not active that incorporate the credit quality and industry sector of the issuer. In addition, indexed variable annuity contracts may be supported by exchange listed derivatives that are not actively traded and are valued based on quoted prices for identical instruments in markets that are not active.

Level 3 measurements

Bonds - Industrial and miscellaneous bonds consist of corporate bonds, including those that are privately placed and ABS. Corporate bonds, including those that are privately placed are valued based on non-binding broker quotes where the inputs have not been corroborated to be market observable. ABS are valued based on non-binding broker quotes received from brokers who are familiar with the investments and where the inputs have not been corroborated to be market observable.

Perpetual preferred stocks - Based on non-binding broker quotes where the inputs have not been corroborated to be market observable.

Unaffiliated common stocks - The primary inputs to the valuation include quoted prices or quoted net asset values for identical or similar assets in markets that exhibit less liquidity relative to those markets supporting Level 2 measurements.

Derivatives - Certain over-the-counter derivatives, such as interest rate cap agreements and certain options (including swaption agreements) are valued using models that are widely accepted in the financial services industry. These are categorized as Level 3 as a result of the significance of non-market observable inputs such as volatility. Other primary inputs include interest rate yield curves and credit spreads.

Separate Accounts - Indexed variable annuity contracts are supported by mortgage loans. The fair value of mortgage loans on real estate is based on discounted contractual cash flows or if the loans are impaired due to credit reasons, the fair value of collateral

The fair value of U.S. Treasury bonds in Level 1 is based on unadjusted quoted prices for identical assets in active markets the Company can access. The fair value of publicly traded bonds in Level 2, including LBASS, is based upon quoted prices for identical or similar assets in markets that are not active, contractual cash flows, benchmark yields, prepayment speeds, collateral performance and credit spreads. Non-publicly traded bonds in Level 2, including LBASS, are valued using a discounted cash flow model that is widely accepted in the financial services industry and uses market observable inputs and inputs derived principally from, or corroborated by, observable market data. The primary inputs to the discounted cash flow model include an interest rate yield curve, as well as published credit spreads for similar assets in markets that are not active that incorporate the credit quality and industry sector of the issuer. The fair value of municipal bonds in Level 3 is based on quoted prices for identical or similar assets in markets that exhibit less liquidity relative to those markets supporting Level 2 fair value measurements, contractual cash flows, benchmark yields and credit spreads. The fair value of all other bonds, including LBASS in Level 3 is primarily based on non-binding broker quotes where the inputs have not been corroborated to be market observable.

The fair value of preferred stocks in Level 2 is based on quoted prices for identical or similar assets in markets that are not active, contractual cash flows, benchmark yields, underlying stock prices and credit spreads. The fair value of the preferred stocks in Level 3 is primarily based on inputs including quoted prices or quoted net asset values for identical or similar assets in markets that exhibit less liquidity relative to those markets supporting Level 2 measurements.

The fair value of unaffiliated common stocks in Level 1 is based on unadjusted quoted prices for identical assets in active markets the Company can access. The fair value of unaffiliated common stocks in Levels 2 and 3 is based on the valuation methods described in Part A4 of this note.

The fair value of mortgage loans on real estate in Level 3 is based on discounted contractual cash flows, or if the loans are impaired due to credit reasons, the fair value of collateral less costs to sell. Risk adjusted discount rates are selected using current rates at which similar loans would be made to borrowers with similar characteristics, using similar types of properties as collateral.

The fair value of cash equivalents and short-term investments in Level 1 is based on quoted prices or net asset values for identical assets in active markets the Company can access. The fair value of cash equivalents in Level 2 is based on quoted prices for identical or similar assets in markets that are not active, contractual cash flows, benchmark yields and credit spreads or amortized cost.

The fair value of free-standing exchange listed derivatives in Level 1 is based on unadjusted quoted prices for identical assets in active markets the Company can access. The fair value of derivatives in Levels 2 and 3 is based on the valuation methods described in Part A4 of this note.

The fair value of LIHTC property investments in Level 3 is based on amortized cost, using the proportional amortization method, which approximates fair value.

NOTES TO FINANCIAL STATEMENTS

The fair value of unaffiliated surplus notes in Level 2 is based upon quoted prices for identical or similar assets in markets that are not active, contractual cash flows, benchmark yields and credit spreads.

The fair value of collateral loans in Level 3 is based on discounted cash flow calculations using current interest rates for instruments with comparable terms.

The fair value of collateral related to derivatives and reinvested collateral from securities lending in Level 2 is based on carrying value due to its short-term nature.

The fair value of the assets of the Separate Accounts in Level 1 is based on actively traded mutual funds that have daily quoted net asset values for identical assets the Company can access. The fair value of the assets of the Separate Accounts in Levels 2 and 3 is based on the valuation methods described in Part A4.

The fair value of the liability for deposit-type contracts is generally based on the terms of the underlying contracts utilizing prevailing market rates for similar contracts adjusted for credit risk. Immediate annuities without life contingencies are generally valued at the present value of future benefits using market implied interest rates which include the Company's own credit risk. Fixed annuities were valued at the account value less surrender charges.

The fair value of the liabilities for collateral related to securities lending and derivatives in Level 2 is based on carrying value due to its short-term nature.

- D. The Company was able to estimate the fair value of all its financial instruments in 2015 and 2014.
21. Other Items
- C. Other Disclosures and Unusual Items

On January 1, 2015, the Company sold its wholly-owned subsidiary, Allstate Assurance Company ("AAC") to its affiliate Allstate Financial Insurance Holdings Corporation ("AFIHC"). AFIHC is a wholly-owned subsidiary of The Allstate Corporation. The Company received \$11 million in cash.

In connection with AAC's plan to withdraw its New York license, the New York Department of Financial Services ("NYDFS") required the Company to establish a custodial account for the protection of AAC's New York issued business. As required by the NYDFS, the custodial account is to be maintained with a minimum amount of assets which may vary over time. As of June 30, 2015, the balance in the custodial account was \$143 million.

Effective April 1, 2015, the Company and AAC entered into a reinsurance agreement whereby the Company retroceded to AAC 100% of its liability for certain universal life policies originally written by Surety Life Insurance Company, a former affiliate, Great Southern Life Insurance Company and Security Life of Denver Insurance Company. The Company transferred assets of \$499 million and ceded statutory policy liabilities of \$478 million, net of third party reinsurance, plus an adjustment for the IMR of \$21 million to AAC in connection with this agreement.

22. Events Subsequent
- An evaluation of subsequent events was made through August 12, 2015 for the Quarterly Statement issued on August 14, 2015. There were no significant subsequent events requiring adjustment to or disclosure in the financial statements.
24. Retrospectively Rated Contracts and Contracts Subject to Redetermination
- E. Risk Sharing Provisions of the Affordable Care Act ("ACA")
- The accident and health insurance premiums and claims reported by the Company are for products not subject to the ACA's risk sharing provisions.
25. Change in Incurred Losses and Loss Adjustment Expenses
- For accident and health insurance products within the Company's book of business, the changes in the provision for incurred losses and loss adjustment expenses attributable to insured events of prior years were immaterial in both 2015 and 2014. The Company did not accrue additional premiums or return premiums related to the prior-year effects in 2015 or 2014.

(b)

Code	Financial or Economic Impact of the Hedge at the End of the Reporting Period
0001	Interest rate liability caps limit the exposure to interest rate increases on variable rate liability or portfolio of variable rate liabilities up to the contracted strike rate. Notional amount is equivalent to hedged amount of par on liability or portfolio of liabilities.
0002	Interest rate swap effectively converts variable rate interest exposure on a portfolio of liabilities from an inflation based rate (CPI or Fed funds) to a variable LIBOR rate. Notional amount is equivalent to hedged amount of par on portfolio of variable rate liabilities.
0003	Credit default swap effectively hedges credit risk exposure on the named debt security or related index or basket of debt securities. Notional amount is equivalent to hedged amount of par on debt security.
0004	Foreign Currency forward effectively reduces foreign currency exposure on the principal amount of foreign denominated fixed income securities. Notional amount is the USD equivalent of the hedged amount of par on debt securities.
0005	Foreign Currency forward effectively reduces foreign currency exposure on foreign denominated equities.
